

## Worksheet 2

**Student Name: Aman Kumar**

**Branch: MCA General**

**Semester: II**

**Subject Name:- Technical Training**

**UID:25MCA20128**

**Section/Group:1/A**

**Date of Performance:13/01/2026**

**Subject Code: 25CAP-652**

### 1. Aim of the Session

To implement and analyze SQL SELECT queries using filtering, sorting, grouping, and aggregation concepts in PostgreSQL for efficient data retrieval and analytical reporting.

### 2. Objective of the Session

After completing this practical, the student will be able to:

- Retrieve specific data using filtering conditions
- Sort query results using single and multiple attributes
- Perform aggregation using grouping techniques
- Apply conditions on aggregated data using HAVING clause
- Understand real-world analytical queries commonly asked in placement interviews

### 3. Practical / Experiment Steps

- Create a sample table representing customer orders
- Insert realistic records into the table
- Retrieve filtered data using WHERE clause
- Sort query results using ORDER BY
- Group records and apply aggregate functions
- Apply conditions on grouped data using HAVING
- Analyze execution order of WHERE and HAVING clauses

#### 4. Procedure of the Practical

(i) Start the system and log in to the computer.

(ii) Open PostgreSQL software.

**iii) Create and select the database.**

create database CompanyDB;

**(iv) Create table using DDL command.**

create table customer\_orders(

order\_id serial primary key,

customer\_name varchar(20),

product varchar(20),

quantity int,

price numeric(10,2),

order\_date date

);

---

**(v) Insert records into the table.**

insert into customer\_orders(customer\_name,product,quantity,price,order\_date) values

('Aman', 'Laptop', 1, 55000.00, '2025-01-10'),

('Rohit', 'Mobile', 2, 20000.00, '2025-01-11'),

('Neha', 'Tablet',1, 30000.00, '2025-01-12'),

('Priya', 'Laptop',1, 56000.00, '2025-01-13'),

('Rahul', 'Mobile', 3, 18000.00, '2025-01-14'),

('Kiran', 'Headphone',2, 3000.00, '2025-01-15'),

('Suman', 'Keyboard', 1,1500.00, '2025-01-16'),

('Ankit', 'Mouse', 2,800.00, '2025-01-17');

**(vi) Display all records.**

select \* from customer\_orders;

	order_id [PK] integer	customer_name character varying (20)	product character varying (20)	quantity integer	price numeric (10,2)	order_date date
1	1	Aman	Laptop	1	55000.00	2025-01-10
2	2	Rohit	Mobile	2	20000.00	2025-01-11
3	3	Neha	Tablet	1	30000.00	2025-01-12
4	4	Priya	Laptop	1	56000.00	2025-01-13
5	5	Rahul	Mobile	3	18000.00	2025-01-14
6	6	Kiran	Headphone	2	3000.00	2025-01-15
7	7	Suman	Keyboard	1	1500.00	2025-01-16
8	8	Ankit	Mouse	2	800.00	2025-01-17

**(vii) Filtering Data Using WHERE clause.**

select order\_id, customer\_name, product, quantity, price

from customer\_orders

where price > 20000;

	order_id [PK] integer	customer_name character varying (20)	product character varying (20)	quantity integer	price numeric (10,2)
1	1	Aman	Laptop	1	55000.00
2	3	Neha	Tablet	1	30000.00
3	4	Priya	Laptop	1	56000.00

### (viii) Sorting Query Results.

#### Ascending Order

select order\_id, customer\_name, product, quantity, price

from customer\_orders

where price > 20000

order by price;

	order_id [PK] integer	customer_name character varying (20)	product character varying (20)	quantity integer	price numeric (10,2)
1	3	Neha	Tablet	1	30000.00
2	1	Aman	Laptop	1	55000.00
3	4	Priya	Laptop	1	56000.00

#### Descending Order

select order\_id, customer\_name, product, quantity, price

from customer\_orders

where price > 20000

order by price desc;

	order_id [PK] integer	customer_name character varying (20)	product character varying (20)	quantity integer	price numeric (10,2)
1	4	Priya	Laptop	1	56000.00
2	1	Aman	Laptop	1	55000.00
3	3	Neha	Tablet	1	30000.00

**(ix) Grouping Data for Aggregation.**

```
select product, count(*) as total_product_sale  
from customer_orders  
group by product;
```

	product character varying (20) 🔒	total_product_sale bigint 🔒
1	Mobile	2
2	Mouse	1
3	Tablet	1
4	Headphone	1
5	Keyboard	1
6	Laptop	2

**(x) Applying conditions on aggregated data (HAVING).**

```
select product,  
sum(quantity*price) as total_revenue  
from customer_orders  
group by product  
having sum(quantity*price) > 50000;
```

	product character varying (20) 🔒	total_revenue numeric 🔒
1	Mobile	94000.00
2	Laptop	111000.00

(xi) Using WHERE and HAVING together.

```
select product, sum(quantity*price) as total_revenue  
from customer_orders  
where order_date >= '2025-01-01'  
group by product  
having sum(quantity*price) > 50000;
```

	product character varying (20) 🔒	total_revenue numeric 🔒
1	Mobile	94000.00
2	Laptop	111000.00

## 5. I/O Analysis (Input / Output)

### Input:

- Customer order details
- Filtering, sorting, grouping, and aggregation queries

### Output:

- Filtered customer records
- Sorted result sets
- Group-wise sales summary
- Aggregated revenue reports

(Screenshots of execution and output attached)

## 6. Learning Outcomes

- Students understand how data can be filtered to retrieve only relevant records.
- Students learn how sorting improves readability and usefulness of reports.
- Students gain the ability to group data for analytical purposes.
- Students clearly differentiate between WHERE and HAVING clauses.
- Students develop confidence in writing analytical SQL queries.
- Students are better prepared for SQL-based placement and interview questions.
