

## Experiment 1

**Student Name:** Aman Kumar

**UID:** 25MCA20128

**Branch:** MCA general

**Section/Group:** 25MCA\_KAR-1

**Semester:** II

**Date of Performance:** 05-01-2026

**Subject Name:** Technical Training

**Subject Code:** 25CAP-652

### 1. Aim:

To design and implement a sample database system using DDL, DML, and DCL commands, including database creation, data manipulation, schema modification, and role-based access control to ensure data integrity and secure, read-only access for authorized users.

### 2. Objective:

To gain practical experience in implementing Data Definition Language (DDL), Data Manipulation Language (DML), and Data Control Language (DCL) operations in a real database environment. This will also include implementing role-based privileges to secure data.

### 3. Implementation/Code:

```
-- QUERY FROM postgres
-- DDL
-- DEPARTMENT TABLE
CREATE TABLE department(
department_id INT PRIMARY KEY,
department_name VARCHAR(20) NOT NULL UNIQUE,
salary FLOAT CHECK(salary>=0)
);

-- EMPLOYEE TABLE
CREATE TABLE employee(
```

```
employee_id INT PRIMARY KEY,  
employee_name VARCHAR(20) NOT NULL,  
department_id INT NOT NULL REFERENCES department(department_id),  
employee_contact VARCHAR(20),  
join_date DATE NOT NULL,  
end_date DATE CHECK(end_date>=join_date)  
);
```

```
ALTER TABLE employee ADD work_location VARCHAR(20);  
ALTER TABLE employee DROP work_location;  
ALTER TABLE employee ADD status VARCHAR(20) DEFAULT 'active';
```

```
-- PROJECT TABLE  
CREATE TABLE project(  
project_id INT PRIMARY KEY,  
project_name VARCHAR(20) NOT NULL UNIQUE,  
department_id INT NOT NULL REFERENCES department(department_id),  
start_date DATE NOT NULL,  
end_date DATE CHECK(end_date>=start_date)  
);
```

```
-- DML  
INSERT INTO department  
VALUES  
(101,'Manager',90000),  
(102,'HR',70000),  
(103,'EMPLOYEE',50000);
```

```
UPDATE department SET salary=80000 WHERE department_id=101;
```

```
UPDATE department SET department_name='Employee' WHERE  
department_id=103;
```

```
INSERT INTO department  
VALUES  
(104,'DEVELOPER',-30000);
```

```
INSERT INTO department  
VALUES  
(104,'DEVELOPER',30000);
```

```
DELETE FROM department WHERE department_id=104;
```

```
INSERT INTO employee  
VALUES  
(1,'Rahul',101,8888888888,'2001-04-12','2010-07-13'),  
(2,'Anuj',102,7777777777,'2003-06-10','2004-05-11'),  
(3,'Aman',103,6666666666,'2006-05-20','2009-09-11'),  
(4,'Naman',103,5555555555,'2006-06-25','2009-08-11'),  
(5,'Karan',103,4444444444,'2006-03-12','2009-05-11');
```

```
DELETE FROM employee WHERE employee_id=3;
```

```
INSERT INTO project  
VALUES  
(11,'P1',103,'2025-08-14','2025-09-14'),  
(12,'P2',103,'2025-08-14','2025-08-30');
```

-- DQL

```
SELECT * FROM department;  
SELECT * FROM employee;  
SELECT * FROM project;
```

-- DCL

```
CREATE ROLE reporting_user  
LOGIN
```

PASSWORD

'user123';

GRANT SELECT ON department TO reporting\_user;

REVOKE SELECT ON department FROM reporting\_user;

GRANT SELECT ON project TO reporting\_user;

REVOKE CREATE ON SCHEMA PUBLIC FROM reporting\_user;

-- QUERY FROM reporting\_user

SELECT \* FROM project;

## 4. Output:

```
53 VALUES
54 (1, 'Rahul', 101, 8888888888, '2001-04-12', '2010-07-13'),
55 (2, 'Anuj', 102, 7777777777, '2003-06-10', '2004-05-11'),
56 (3, 'Aman', 103, 6666666666, '2006-05-20', '2009-09-11'),
57 (4, 'Naman', 103, 5555555555, '2006-06-25', '2009-08-11'),
58 (5, 'Karan', 103, 4444444444, '2006-03-12', '2009-05-11');
59
60 DELETE FROM employee WHERE employee_id=3;
61
62 INSERT INTO project
63 VALUES
64 (11, 'P1', 103, '2025-08-14', '2025-09-14'),
65 (12, 'P2', 103, '2025-08-14', '2025-08-30');
66
```

Data Output Messages Notifications

	employee_id [PK] integer	employee_name character varying (20)	department_id integer	employee_contact character varying (20)	join_date date	end_date date	status character varying (20)
1	1	Rahul	101	8888888888	2001-04-12	2010-07-13	active
2	2	Anuj	102	7777777777	2003-06-10	2004-05-11	active
3	4	Naman	103	5555555555	2006-06-25	2009-08-11	active
4	5	Karan	103	4444444444	2006-03-12	2009-05-11	active

## 5. Learning Outcomes:

1. About query writing in PostgreSQL.
2. About various DDL, DML and DCL commands.
3. About the application of CHECK constraint.
4. About role-based privileges to secure data.
